

**Charlee Bear**  
Dog treats with a healthy purpose

## FREQUENTLY ASKED QUESTIONS

### Can puppies eat Charlee Bear treats?

Puppies come in many different sizes. Use your good judgment. Many trainers use Charlee Bears to train puppies. If your puppy is old enough to chew and swallow kibble our treats should be fine. It is always good to observe your puppy when giving a new treat to see if he is chewing.

### Can old dogs eat Charlee Bears?

Many old dogs love Charlee Bears because they are easy to chew and our simple ingredients make them easy to digest. Even old dogs without teeth enjoy our treats.

### Can I give my dog Charlee Bears instead of food?

Although our treat is all natural and wholesome it was not formulated as a complete diet and should not be used as a food replacement on a regular basis.

### How many calories are in each treat?

Each Charlee Bear Treats weighs around 1 gram and is less than 3 calories.

A medium size dog biscuit weighs around 36 calories. That means you dog can eat 12 Charlee Bear treats for the same number of calories as 1 medium size biscuit

### What kind of dog is on the package?

The dog on the package was Zach and he was a Charlee Bear Dog, a type of mixed breed that was bred in the 1990's. He weighed around 50 pounds. He helped start our business and came to all meetings. He was the company inspiration and still is our symbol.

### How many Charlee Bear treats can I give my dog in one day?

Charlee Bear Dog Treats are used by trainers all over the country. The low calorie count means you can use a lot of treats while training. The exact number of treats a dog should eat in a day depends on the size of the dog, the breed, the current activity level and whether or not the dog is currently overweight. Work with your veterinarian to determine an ideal weight for your dog. You can use Charlee Bear Treats to provide a way to reduce calories and still keep the fun of rewarding and training.

### Where do you source your ingredients?

Our Charlee Bear Treats are manufactured in the USA and all of our ingredients are sourced in the USA as well.

## FREQUENTLY ASKED QUESTIONS

### Do Charlee Bear treats contain garlic?

We have researched the current concern about garlic and have been advised that at the level it is in our treats it does not present any problem. There is about 1 teaspoon of garlic powder in 100 pounds of treats. That means that a dog would have to eat 100 of our 1 pound bags to get 1 teaspoon of garlic. Since there are about 400 treats to a bag that means that a dog would have to eat 40,000 treats to get just 1 teaspoon of garlic. This tiny bit of garlic has always been a part of our recipe and we believe it helps give it the flavor dogs love. We have been making Charlee Bears for over 17 years and all of us at Charlee Bear Products have been giving them to our dogs for all of that time. Please go to [www.dog-health-guide.org/dog](http://www.dog-health-guide.org/dog) for more information on garlic.

### Do Charlee Bear treats contain salt and sodium?

We have included salt at a very low level. There is about 1 tablespoon of salt in 100 pounds of our liver type treats and about 2 tablespoons in 100 pounds of our Cheese&Egg Treats. That means that your dog would have to eat 100 bags of our 1 pound bags to get 1 tablespoon of salt. Even if your dog ate one, one pound bag per week, it would take almost a year to eat 1 tablespoon of salt.

Salt is about 1/3 sodium. 100 grams of salt contains about 39 grams of sodium. So in 1 tablespoon of salt there is about 1 teaspoon of sodium

### Do Charlee Bear Treats contain calcium, magnesium and phosphorus?

Our treats are considered low in calcium and magnesium and may contain small amounts of phosphorus from liver and wheat. A rough estimate on phosphorus would be .002 grams of a 1 gram treat.

### What is the fat content of Charlee Bear treats?

Due to our ingredients and the small size of each treat there would be less than 0.1 grams of fat per treat. This is low fat.
